

Computer-controlled, High-speed, Bartacking Machine

LK-1900A SERIES

LK-1900A-SS (Table stand is optionally available.)

LK-1900A SERIES

The world's highest sewing speed of 3,000rpm! The proven computer-controlled bartacking machine has been dramatically evolved to be an easier-to-use machine.

Higher productivity.

- The machine achieves the world's highest sewing speed of 3,000rpm.
- In addition to the high-speed sewing performance, the machine's starting, stopping, thread-trimming and automatic presser lifting speeds have been increased to significantly shorten total cycle time (reduced approximately 30% compared to our predecessor model: For 42-stitch large bartacks).

Excellent seam quality.

- The machine comes with a newly developed needle thread grasping mechanism. The mechanism prevents thread from slipping off from the needle eyelet at the beginning of sewing, from tangling on the wrong side of the material and also being stained during sewing.
 The thread trimming mechanism has been further
- improved to shorten the length of thread remaining on the wrong side of the material after thread trimming.

Wider sewing area and many different sewing patterns.

- With its 30mm (length) by 40mm (width) sewing area, the machine can sew many different shapes of bartacks.
- The machine is provided as standard with as many as 50 different types of sewing patterns including semilunar bartacking, round bartacking, radial tacking as well as conventional bartacks.
- The LK-1900A is also able to sew bartacks using the same data used for the LK-1900 (EP-ROM).

The machine is provided as standard with the active tension (electronic thread tension control mechanism).

- Since the machine is provided with an active tension mechanism, it is able to set a needle thread tension that matches various sewing conditions (such as thread, material and sewing speed) on the operation panel, store the data in memory and reproduce it.
- The needle thread tension can be separated according to stitching type or portion of a seam, such as the beginning part of the seam, base stitched part, zigzag stitched part and end of the seam (fastening stitch).
- When the operation panel (IP-200B) is used in combination with the active tension, the needle thread tension can be set on a stitch-by-stitch basis. This helps eliminate undesired thread tension variations at a multi-layered part of a material or with sewing direction, thereby contributing to upgraded seam quality.

LK-1900A-SS (Table stand is optionally available.)

Oil stains are eliminated.

- Thanks to our advanced dry-head technology, the frame (needle bar and thread take-up) no longer requires lubrication. This prevents the material from being stained with lubricating oil.
- Just a small quantity of just clean oil is supplied from the oil tank to the hook.

A wide choice of subclass models of LK-1900A

The LK-1900A model comes in five different subclass models, such as S type (standard), H type (for heavyweight materials), F type (for foundation), M type (for knits and knitted materials) and W type (with a large shuttle hook for heavy-weight materials), to offer a choice according to any application.

Bartacking pocket lip of suits (S type)

 Attaching the shoulder straps to brassier (F type)
 Presser foot for vertical bartacking is supplied with the unit as an accessory.

- Auto-lifter mechanism utilizing a new system.
- The machine is provided as standard with an auto-lifter that uses a new stepping-motor system. This helps reduce operator fatigue.
- It is also possible to change over the stroke of the autolifter from a one-step stroke to a double-step stroke, which offers easier positioning of a material on the machine. For the double-step stroke, an intermediate stopping height can be established on the operation panel.
- The presser foot lift can be set to a maximum of 17mm by using the reverse-rotation needle-up function in combination with the auto lifter mechanism.

The sewing starting point can be corrected.

The sewing starting point can be shifted in the X/Y direction. This enables the correction of a sewing pattern in accordance with the presser foot configuration.

- The needle's penetrating force into the material has been increased. This provides an improved responsiveness to heavy-weight materials for the H type machine.
- The W type has adopted a large shuttle hook, which reduces the frequency of bobbin-thread changing to enable highly efficient sewing work.

Bartacking crotch of jeans (H type)

• Bartacking shoulder of running shirt (M type)

Excellent workability and operability.

- The direct-drive head (with no belt), which is directly connected to a compact AC servomotor, achieves outstanding responsiveness and improved stop accuracy. This head helps create a comfortable working environment with reduced vibration and noise.
- The arm section of the machine head is fitted with a hand pulley. This allows the operator to visually check the needle entry points.

Highly reliable electrical system.

- The machine has adopted a highly reliable and safe transformer-less switching power system with an increased resistance to voltage fluctuations.
- Detailed error indications prevent trouble from occurring.

OPERATION PANEL (You can choose operation panel.)

STANDARD PANEL

- Functional settings, such as pattern numbers, enlargement/reduction scales, swing speeds and needle thread tensions can be established through the operation panel with ease.
- Standard sewing patterns can be assigned to pattern keys P1 to P50. Any of the sewing patterns assigned to the P1 to P25 pattern keys can be activated with a touch of the corresponding key. This means that workability is improved by assigning 25 sewing patterns that are most frequently used to those pattern keys.
- As many as 20 different cycle sewing patterns, each of which combines a maximum of 30 different sewing patterns, can be stored in the memory.
- The operation panel has been installed at an angle and can be placed at the top, bottom, right or left part of the table according to the operator's preference.

IP-200B

- A large color LCD touch panel has been adopted for the display. It gives clear displays that allow the operator to understand operating procedures.
- The IP-200B panel can be connected to a personal computer and can store data on SmartMedia. This allows data to be exchanged or shared among sewing machines installed in a factory or among remote factories.
- The IP-200B panel has been provided with a process improvement supporting feature through the indication of the operational state of the sewing machine, and a maintenance and management feature for indicating the needle changing timing and cleaning timing.

LK-1900A-SS/Installation of the IP-200B (Table stand is optionally available.)

SmartMedia card

Connected to a personal computer

Computer-controlled, High-speed Bartacking Machine for Eyelet Buttonholes

LK-1901A

LK-1901A-SS (Table stand is optionally available.)

The machine ensures high-quality bartacks on eyelet buttonholes.

- The machine is provided with a material-drawing mechanism which draws the right and left parallel portions of an eyelet buttonhole near to one another.
- The machine performs bartacking with the right and left parallel portions of the eyelet buttonhole drawn near to one another after the buttonhole is clamped under the work clamp foot, thereby finishing highly durable and well-tensed eyelet buttonholes.

The sewing pattern best suited to the sewing product to be bartacked can be selected by single-key operation.

- Three different sewing patterns (21-, 36- and 48-stitch bartacking) are prepared to enable easy switchover of sewing sizes. If the sewing patterns are assigned to the pattern keys on the operation panel, the sewing patterns can be called up or changed with single-key operation.
- The machine sews the most optimally suited bartacks on eyelet buttonholes on the front bodies of garments and straight buttonholes that differ in stitch number and size on jacket lapels, thereby improving the finished quality of sewing products.

The material drawing mechanism can be switched to ON/OFF.

The material drawing amount can be adjusted to 3mm at maximum. The material drawing mechanism can be switched ON/OFF in accordance with the setting of the memory switch. With these features, the material drawing mechanism can be used with greater flexibility.

Computer-controlled, High-speed Belt-loop-attaching Machine

LK-1902A-SS (Table stand is optionally available.)

The sewing pattern best suited to the sewing product to be bartacked can be selected by single-key operation.

The machine is provided as standard with six different linear bartacking patterns. Since the sewing size can be easily changed, the optimal number of stitches and sewing size can be speedily selected according to the belt-loop width. If the normally used patterns are assigned to the patterns keys, a desired pattern can be called up or changed with single-key operation.

The machine head has been designed with an emphasis on operability.

With its broadly curved feed bracket (presser arm), the machine permits easy placement of the material to be sewn. The slimly shaped bed and head design that allows free space under the arm demonstrates greater operability in handling materials on the machine and continuous processes. These features contribute substantially to increased productivity in belt-loop attachment processes.

WORK CLAMP FOOT AND FEED PLATE FOR LK-1902A (for belt-loop attaching)

■ WHEN YOU PLACE ORDERS

Please note when placing orders, that the model name should be written as follows:

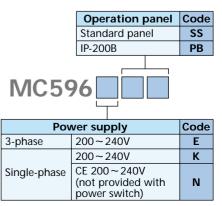

[Machine head] •Bartacking

Foot pedal for standing work (optional)

- 2-pedal unit for standing work* [Part No. M85205800A0]
- Pedal switch conversion cable asm. [Part No. M90125900A0]
- PK-57*
 [Part No. GPK570010B0]
- Pedal switch conversion cable asm. [Part No. M90135900A0]
- To connect the cable asm. to the electrical box, conversion cable (separately available) is necessary.

[Control box]

To order, please contact your nearest JUKI distributor.

| Model name | Eyelet buttonhole bartacking machine | Belt-loop attac | ttaching machine | | | |
|---|--|--|-------------------------------|--|--|--|
| | LK-1901A-SS | LK-1902A-SS | LK-1902A-HS | | | |
| Application | Standard | Standard | For heavy-weight materials | | | |
| Max. sewing speed | | 3,000rpm | | | | |
| Sewing area | | 30mm (L)×40mm (W) | | | | |
| Stitch length | | 0.1~10mm | | | | |
| Needle bar stroke | | 41.2mm | | | | |
| Lift of the work clamp foot | (by using the reve | Standard 14mm rse-rotation needle-u | o function 17mm) | | | |
| Auto-lifter | Provided as | s standard (stepping r | notor type) | | | |
| Needle thread tension | Active tension (elec | tronic thread tension | control mechanism) | | | |
| Needle (at the time of delivery) | DP×5 (#16) | DP×5 (#16) | DP×17 (#21) | | | |
| Hook | | Standard shuttle hook | (| | | |
| Number of stitches that can be stored in memory | | Max. 20,000 stitches | | | | |
| Applicable pattern number | 11, 12, 13 | 17, 18 (19, 20, 21, 22*) *This device has been factory-set to "invoking prohibited" status at the time of delivery. | | | | |
| Number of data that can be input | 200 patterns (for up to 150 patterns, sewing data can be added.) | | | | | |
| Enlarging/Reducing facility | | 5 (1% step), Pattern enl ne by increasing/decrea | | | | |
| Memory medium | | EEP-ROM, EP-ROM | | | | |
| Material drawing amount | Max. 3mm | 3mm — | | | | |
| Bobbin thread counter | Provided as standard (up/down method) | | | | | |
| Lubrication | Hook: minute-quantity lubrication | | | | | |
| Lubricating oil | JUKI New Defrix Oil No.2 (equivalent to ISO VG32) | | | | | |
| Sewing machine motor | 450W compact AC servomotor (direct-drive system) | | | | | |
| Power consumption | | 320W | | | | |
| Weight | Machine head (in | clude motor) 42kg, Co | ontrol box 16.5kg | | | |

RE005 REG.NO.JSAE389 089 JUKI CORPORATION HEAD OFFICE The environmental management system to promote and conduct 0the technological and technical research, the development and design of the products in which the environmental impact is considered. 3the conservation of the energy and resources, and the recycling, in the research, development, design, distribution, sale and maintenance service of the industrial saving machines, household serving machines and industrial-use robots, etc. and and in the purchase, distribution and sale of the household commodities including the healthcare products.
